

NOSTR AFRICA · CUSTOMER GUIDE

Getting started with PhotoCraft

A free, Photoshop-style image editor that runs in your web browser.

photoshop.nostr.africa · Updated October 2026

PhotoCraft is a free image editor that runs entirely in your browser at **photoshop.nostr.africa**. There is nothing to install and no sign-up.

What you can do

- Work with layers, masks and adjustment layers (for example Levels, Curves, Hue/Saturation)
- Make selections, apply filters, draw and add text
- Add layer styles such as shadows, glows and strokes
- Open Photoshop (PSD) files

Your images stay with you

PhotoCraft runs on your own device. Your images are **not uploaded** to our server: they are opened from, and saved back to, your own computer.

EARLY ALPHA

PhotoCraft is in an early alpha stage. Some features may be missing or may behave differently from other editors, and the app can occasionally fail. Save your work often and keep a copy of your original images.

1 What you need

- A desktop or laptop computer with an up-to-date web browser. A mouse or trackpad and keyboard are recommended.
- A good internet connection for the first visit: the editor is a large download (**about 26 MB**). After it has loaded, editing happens on your device.
- Enough free memory for large images. Very large photos or many layers need more memory.

2 Open the editor

1. Go to **photoshop.nostr.africa**.
2. Wait while the page shows **"Loading the image editor..."**. On a slow connection this can take a while.
3. If a message says it is taking longer than usual, click **Reload** to try again.

3 Edit an image

1. Use the **File** menu to open an image from your computer, or to start a new document.
2. Use the tools, layers and adjustments to make your changes. Adjustment layers keep your original pixels unchanged, so you can change or remove an edit later.
3. Use the **File** menu again to save or export the result to your computer.

TIPS

- Work on a copy of important photos, never the only original.
- Save regularly. Closing or reloading the browser tab can lose unsaved work.
- If the editor becomes slow, close other tabs or work with a smaller image.

4 Problems or ideas?

Because PhotoCraft is an early version, your feedback helps. Tell us what you were doing, which browser you use, and what went wrong.
